What is ThermiSmooth?

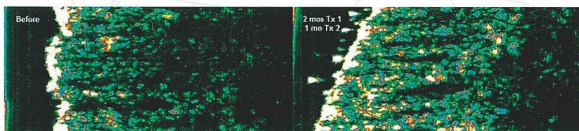

ThermiSmooth is a non-invasive procedure which uses radio frequency for improving skin laxity. It is ideal for treating the problem areas around the eyes, mouth, cheeks and neck.

How It Works

- Gentle heating using temperature controlled RF energy
- Stimulates Collagen Remodeling

What to Expect

- Gentle Therapy
- Non-Invasive
- No Downtime
- Series of 3-4 treatments

50mHz ultrasound done before treatment and after the second treatment. Note the increased skin thickness and improved skin quality.

-Denis Branson, MD
