

Omni Recovery Kit

After Microlaser Peel/ Resurfacing Profractional

Core Recovery Complex - Concentrated growth factors that will be applied immediately after your procedure. Any remaining product will be sent home with you to be applied immediately after your first shower on clean skin. Continue this daily until gone. The needless syringe can help to draw it up from the bottle.

Protective Recovery Balm - Peptides and minerals to aid in healing. This can be used as a thin layer to moisturize and protect your lasered skin. Deeper procedures may prefer using Aquaphor for the first 2 days for heavier coverage.

Omni-Plex spray - Mixture of 90 peptides and vitamins, which will also aid in healing and collagen formation. It does sting, so do a test spot before spraying your entire face. This should also be applied immediately after a shower or washing so it can reach the surface of your skin. Consider starting this at about day 3, and can be continued until gone.

Boost Recovery Mask - Mixture of growth factors, peptides, and moisturizers. Use this when your skin is completely healed but still dry and tight. Don't waste the goop in the bottom of the package (precious stuff). You can put this on your neck, chest, or other areas.

Rinseable Azulene Cleanser - Gentle cleanser to wash your freshly lasered skin. It does contain wheat germ oil.

Medical Barrier Cream - Heavy but gentle moisturizer that can be used once skin has healed and is now dry and pink rather than moist and gooey. You can then transition to your BioCream as tolerated.
